FEATURES

GUARANTEED ALLOCATIONS

Holders of our tokens will be divided into six Tiers. Which Tier a holder is assigned depends on the amount of tokens in their possession. Five out of the six Tiers give guaranteed allocations.

LOCKED LIQUIDITY

All projects that will hold their IDOs on METAGENE will have to “lock in” at least 50% of their liquidity either through METAGENE or a trusted third-party lock system. This will reduce risks for investors and increase projects’ transparency.

STAKE & FARM

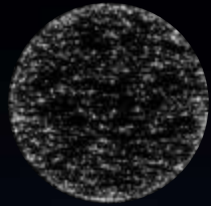

Holders of \$GENE tokens will earn yield on the tokens that they choose to stake on our platform. The amount of \$GENE tokens you will lock on our platform will determine your Tier and allocation. In other words, \$GENE tokens have a dual purpose.

THE SAFEST INCUBATOR

Our investors’ safety is our main priority. We only hold IDOs after all relevant parties have gone through a rigorous KYC process and signed legally binding agreements that ensure transparency and high quality of work.

THE 3 PILLARS OF METAGENE

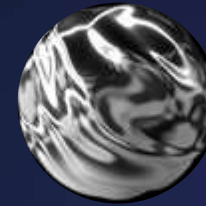

AUDIT AND ADVISORY WORK

We have a lot of experience launching crypto start-ups. We are well aware of all the troubles and pitfalls novice dev teams have to deal with in the early stages of their projects' development. Therefore, we have created an advisory board that will audit and advise new projects. We share our marketing and technical expertise with dev teams to ensure successful deployment of their products.

INCUBATOR

We are always hunting for talent. Once we discover a promising dev team that has the skills and mindset necessary to deploy truly transformative projects, we take them under our wing and guide them through all the stages of the development process.

LAUNCHPAD

Once dev teams go through all the stages of our selection process (KYC, skillset and product quality checks) they get a chance to hold IDOs and launch their projects into the market. We only focus on high-quality metaverse and NFT projects that have strong fundamentals, innovative plans and unique utility. Our goal is to create an environment where dev teams and investors can forge our virtual future together.

TIER SYSTEM

METAGENE HAS A SIX-TIER STAKING SYSTEM

The six-tier system ranges between 130,000 \$GENE tokens for Tier 1 and 3,250,000 \$GENE tokens for Tier 6. This setup makes project participation more accessible and also attracts large investors who will benefit from the 100x pool weight granted by the top tier.

Staking is mandatory for all holders who would like to participate in IDOs that will be held on the MetaGene platform.

Your \$GENE tokens must be staked no later than 24 hours before the IDO begins in order to be eligible for whitelisting. Whitelist snapshots are taken 24 hours prior to each IGO.

MetaGene staking offers five lock periods. APY (annual percentage yield) depends on both: tiers and lock periods. Here's a table that shows what tiers and lock periods determine APY.

Staking participants will be able to use a built-in calculator to get a precise estimate of how profitable their investment will be depending on what lock period they choose.
